

## Fujifilm Drypix 7000

### Description

DryPix 7000, the DryPix series flagship features outstanding performance, speed and quality – Plus the bonus of networkability. The DryPix 7000 is the ultimate dry laser imager for centralized imaging and high speed imaging modalities such as multi-slice CT. Providing wet imager performance and image quality from a dry imager, the DryPix 7000 is also ideal for wet imager replacement.

DryPix 7000 boasts features such as remarkable operating efficiency, highest film throughput, backup security and unrivalled image quality, while maintaining the lowest cost of ownership. An integral part of the DryPix Print Networking System, the DryPix 7000's networking capabilities set new standards for convenience and versatility.
